

1. COMPOUND SPECIFICATIONS

COMPOUND	EXPECTED PACE DIFFERENCE	BRAKE BITE	OPTIMAL OPERATING TEMPERATURE	TYRE LIFE
 SOFT (S)	~0.5s / lap faster	High	85°C – 90°C	8 – 11 Laps
 MEDIUM (M)	Baseline (Reference)	Standard	90°C – 95°C	15 – 18 Laps
 HARD (H)	~0.35s / lap slower	Moderate	95°C – 100°C	25 – 28+ Laps

Target Hot Tyre Pressure: Aim for **25.0 psi HOT** across all 4 tyres (set starting cold pressures at **17.0 – 19.0 psi** depending on ambient track temperature).

2. OPERATING WINDOWS & DEGRADATION CURVES

3. PUSH-TO-PASS (P2P) SYSTEM

TURBO OVERBOOST

+0.20 bar

Around 10% more power

BOOST DURATION

10 Seconds

Continuous maximum power burst

SYSTEM COOLDOWN

30 Seconds

Recharge period before re-triggering

RACE BUDGET

12 Activations

Total uses available per session / race

How to Activate: The P2P system is bound to the **KERS button** in Assetto Corsa. Go to Controls > Car > KERS (or in Content Manager: Settings > Assetto Corsa > Controls > Patch > KERS) and map a button on your steering wheel. Pressing the button engages overboost instantly at full throttle.

⚠ CRITICAL NOTICE: TYRE DEGRADATION & EXPLOSION HAZARD

Do not attempt to drive past tyre life! In Assetto Corsa, tyres do not simply wear down to lower grip—they will suffer **catastrophic structural carcass explosions** when pushed past their physical limit.

When the tyre reaches the end of its life and you experience a **massive loss of grip**, you have approximately **1 to 2 laps** before an explosion could happen.

- An explosion results in **immediate deflation (0% grip)**, dropping the chassis onto the wheel rim.
- This causes violent high-speed spinouts with total loss of steering and braking control.

Golden Rule: When you feel that sudden, massive drop in grip, **BOX IMMEDIATELY**. Pushing for another lap or two carries an extreme risk of an unavoidable DNF.
